Dear business partners, dear customers.

Our company is partly affected by the delay and shortening of deliveries of goods due to the COVID 19 pandemic. This situation has a direct impact on the production of our components. For this reason, we would like to inform you that some of your orders may delay delivery between 1 and 4 business weeks.

Given the national and international measures regarding COVID 19 and the measures that we have also taken in our society, we assume that this situation will be better.

We assure you that we are doing everything in our power to complete the reliability of supply. There may be real risks that we are currently unable to predict.

If there are effects of force majeure, obstacles at work due to the greater spread of COVID-19 among employees, problems with the supply of materials and subcontracting, or other circumstances affecting our deliveries, we will officially inform you immediately.
